STAINLESS STEEL INSERT BALL BEARINGS MOUNTED IN THERMOPLASTIC HOUSINGS!

ANTI-CORROSIVE
WATER / CHEMICAL
RESISTANT
LIGHT-WEIGHT HOUSINGS

FOR CHEMICAL APPARATUS TEXTILE, PACKAGING,
FOOD PROCESSING MACHINERY

ASAHI SEIKO CO., LTD.

Plastic Series INSERT BEARING UNITS

This plastic series unit is consisted of the stainless steel insert bearing and the thermoplastic housing. It is self-aligning and anti-corrosive. The insert bearing is factory-lubricated with FD grease.

The stainless steel insert bearing and the thermoplastic housing are highly anti-corrosive and water/chemical resistant. The solid base housing does not easily allow bacteria to propagate and keeps good hygienic condition.

The MB series stainless steel insert bearing is filled with food grease, which conforms to RoHS Directive, and it meets the food processing application. The bearing unit can be equipped with open and closed covers for safety as well as to prevent dust.

Back seal can be accommodated to the back side of the flange type bearing units for a prevention against dust and humidity.

Important

- 1. The Table 6 shows the average values of the static breaking strength of the thermoplastic housings measured in the normal temperature. Therefore, they can vary to the operating temperature and the load type and direction. Also, the housing must not be hit strongly as it can be damaged or broken as long as it is made of polyester resin.
- 2. The plastic series bearing unit may generate static electricity. So, we recommend to electrically ground it. It cannot be used for such applications that never allow the static electricity generation.
- 3. The MB type insert bearings are factory-lubricated with FD grease (See the suffix 'FD' to the bearing number), which is Food Grade grease authorized by USDA (United States Department of Agriculture) and approved as USDA H-1 grade grease. The grease is safe, but be careful not to let it touch the food if the grease flows out of the bearing.
- 4. Back seal is available with the flange type units like MBFPL, MBNFL and MBFBL series. Please consult with us when needed.
- 5. The MB type insert bearing can be replaced by another stainless steel insert bearing series MUC type. In this case, the back seal, which is applicable to flange type bearing units, cannot be equipped due to the difference of design between MB and MUC type bearings.
- 6. Tighten properly two set-screws evenly with the recommended tightening torque as shown as per the Table 5 just in order to prevent the set-screws from being loosened due to vibration during operation and also to prevent the inner ring crack due to the over-tightening of the set-screws.
- 7. Tighten properly the fixing bolts evenly with the recommended tightening torque also as shown as per the Table 5 just in order to prevent the housing deformation that may be caused by over-tightening of the fixing bolt.
- 8. Some of the bolt sizes are different from those of the cast iron housing bearing units.
- 9. Specifications may change without prior notice.
