

What is OneMeta?

OneMeta is a Control System that provides seamless communication between Automation Equipment via different protocols (TCP Socket Communication, Modbus TCP, and File Transfer) and IT Systems (ERP, WMS or others) via Web API. Use cases include automation like palletization, sorting systems and many more.

Why OneMeta?

OneMeta allows Automation System and IT System to communicate with each other without the need to understand each other technical requirement since it is encapsulated in OneMeta. This acts like a translator between 2 people with different language background.

Features of OneMeta

- **Configuration of standard protocol**
OneMeta supports direct PLC Communication, Web Socket Communication. Users will configure the inbound and outbound messages between Automation System and IT System.
- **Customization solution to your requirement**
Our consultant will go through the requirements with end users to customize a process flow using OneMeta as the middleware.

Benefits of OneMeta

- Ease of integration between Automation System and IT System
- Faster implementation period
- Ease of troubleshooting
